Regarding a Letter of Invitation for ASABE 2026 AIM

Dear Jingyang Ye:

On behalf of the American Society of Agricultural and Biological Engineers (ASABE), we are pleased to welcome you to attend the 2026 Annual International Meeting (AIM) to be held July 12-15 in Indianapolis, Indiana at the JW Marriott Indianapolis.

Visitors of a foreign country seeking to attend or participate in the 2026 AIM may require appropriate documents to enter the United States. The type of documentation required depends on the purpose of the visit, and from which country you reside. For an overview and more information on obtaining a visa, visa policy and procedures, please visit the [State Department's Visa Policy and Procedure Site](#). While we have no influence or role in the Visa process, we do want you to be aware of potential delays in the process should you need to update your Visa. Due to potential lags in Visa processing in some countries, please apply as early as possible prior to your departure.

ASABE is an educational and scientific organization dedicated to the advancement of engineering applicable to agricultural, food, and biological systems. Founded in 1907, ASABE is comprised of nearly 7,000 members representing more than 100 countries.

ASABE members serve in industry, academia, and public service sectors of our industry. AIM brings engineers from industry, academia, and public service sectors of our industry together to share the most recent technological advances in agriculture and related industries including the important development of new standards within the industry.

For over a century, ASABE has hosted individuals from around the world at AIM and will continue to provide specialized technical sessions, poster presentations and continued educational programming for conference attendees. In addition, ASABE's AIM introduces attendees to regional engineering operations and technology through specialized technical tours. Finally, one of the primary purposes for ASABE's AIM is to provide time for various Committees to meet and discuss new developments and needs for industry standards for North America and internationally in nine diverse discipline areas such as ergonomics, safety and health; plant, animal, and facility systems; machinery systems; applied science and engineering; natural resources and environmental

systems; energy systems; processing systems; information technology, sensors, and control systems; and additional non-technical groups.

ASABE standards committees are open forums for participation and provide tremendous opportunities for pre-professionals and professionals desiring to be involved with standards used to design, test, and manufacture agricultural and biological equipment and specialized practices.

It is important to understand that during your stay in the United States, you will not be remunerated by ASABE, nor can you be engaged in any employment. You will be responsible for your conference registration fee and travel expenses that include airfare, ground transportation, hotel, meals, and travel insurance.

Your attendance at ASABE's AIM demonstrates your commitment to enhancing your professional knowledge and expertise in agricultural and biological engineering. ASABE looks forward to your participation in the AIM in 2026. For updated information about the conference, please visit our website <https://asabeaim.org/>.

Sincerely,
