

Handwritten notes and diagrams for Mechanics of Materials (材料力学), covering various topics in stress, strain, and structural analysis.

Topics and Diagrams:

- Stress and Strain:** Stress-strain curves, Hooke's Law, Poisson's ratio, and thermal expansion.
- Internal Forces:** Shear force and bending moment diagrams for various beam configurations.
- Stress Analysis:** Principal stresses, maximum shear stress, and Mohr's circle.
- Strain Analysis:** Strain rosettes and the relationship between stress and strain.
- Structural Analysis:** Deflection of beams, influence lines, and stability of structures.
- Material Properties:** Elastic modulus, yield strength, and ultimate tensile strength.

The notes include numerous equations, diagrams, and examples, providing a comprehensive overview of the subject.
